

Light is our passion

50W DALI-2 LED Driver with Smooth Dimming to 1%

ECOdrive

Programmable digital ECOdrive LED driver providing standard LED fixtures with the smoothest flicker-free dimming to 1% light output, delivering value to any application. The LED driver is compatible with the DALI-2 lighting control protocol, and works seamlessly together with LED modules, controls and intelligent luminaire elements.

Product offering

7-04 *7-04	eldoLED ECOdrive 565/U Intelligent LED privar/Controller Paper correct: 0.664 max. LEO output vellage: DC < 60V LEO output current: 150-1400mA (settable) LEO output current: 150-1400mA (settable)	η: 86% typ PF: >0.9C THO: <20% Ta: <20°C to <00°C	AC 120 250V, 50 604 M EC 130 250V EC 150 250V	SELV (C S EL STATE STATE	For operation with LEDs only LED output UL class 2 For use in damp and dry locations Designed in EU. Made in North America	Disconnect power when installing or servicing, thisall in accordance with national and boal electrical code. CAUTION Corond driver case to ervoid possible shock hazard. ECOdrive 565/U

Part number (P/N)	EC0565U2
Product description	ECOdrive, 50W, DALI-2 + AUX, 1 control channel, constant current, 1x 55V output, side feed, long metal

Features & benefits

Natural dimming	Dim to 1%, smooth brightness changes, excellent flicker performance, adaptable dimming curves, configurable minimum dimming level
Symbiosis	Seamless interoperability with LED modules, controls and in-luminaire intelligent devices
LEDcode	LEDcode2 connects to integrated digital accessories, supports location-based loT applications and enables wired and wireless lighting control through LEDcode peripheral devices
Programmable	Fine-tune your driver for any application
Performance	Universal input voltage range, low inrush current and total harmonic distortion (THD), high power factor and efficiency
Camera compatibility	Hybrid HydraDrive technology is proven to work in TV studios and security camera environments

Programming tools				
Programming interface	TOOLbox pro (TLU20504)			
Programming cable set	TOOLbox pro to LED driver, programming cable, 5pcs (TLC03051)			
Programming Hand-held, Touch-and-Go	PJ0035HH1			
Programming jig	PJ0500U1			
Programming software	FluxTool			

Warranty

Order number configurator

P/N	LED driver part number.
LED output current	Enter value in 1mA increments, e.g. "811" for 811mA
Dimming curve	"LOG" for logarithmic (default) "LIN" for linear
Minimum dimming level	Leave blank for default minimum dimming level of 1.0%. Specify in 0.1% increments, e.g. "10.5" for 10.5%.

Input characteristics		
Nominal input voltage range AC	120 - 250V (ENEC), 120 - 277V (UL)	
Nominal input voltage range DC	120 - 250V	
Maximum input current	0.65A @ 120V / 60Hz	
Input frequency range	50 - 60Hz	
Efficiency at full load	86%	
Power factor at full load	> 0.9	
THD at full load	< 20%	
Maximum inrush current	< 200mA ² s @ 120V / 60Hz	
Surge protection	2kV differential mode (DM) 2kV common mode (CM)	
Maximum standby power	< 0.5W	
	If no load connected to the AUX output	

Output characteristics

50W		
1 (UL Class 2)		
150 - 1400mA		
Programmable in 1mA increments within specified current range		
+/- 5% at programmed LED output current		
1.5 - 55V		
15.5 - 25V DC, 18mA max		
1500 1400 50W max		

Control channels	1
Control protocol	DALI-2 Device Type 6
	LEDcode2
Dimming range	100% - 1%
Dimming curve options	Logarithmic (default) Linear
Dimming method	Hybrid HydraDrive
Dimming curves	100 90 80 100 100 100 100 100 100 100

Environmental conditions

Operating ambient temperature (Ta) range	-20 °C to +50 °C
Maximum operating case temperature (Tc max)	80 °C
Lifetime	50000 hours at a maximum case temperature (Tc) of 80 °C
UL Type TL	Measured Tref: 67 °C Maximum allowed Tref: 86 °C Measured at 1400mA

Thermal	The LED output current is decreased whenever the internal LED driver temperature exceeds factory preset temperature. The LED output current is increased again once the internal LED driver temperature drops below this internal temperature threshold. If the internal LED driver temperature continues to increase, despite a decrease in output current, the LED driver will shut down
LED output short circuit	The LED output current is cut off whenever the LED driver detects a short-circuit. The LED driver will attempt a restart every 400ms after a short-circuit is detected.
LED output overload	The LED driver decreases the LED output current sequentially, until it reaches its maximum rated power, whenever a load that exceeds the LED driver's maximum rated power is connected to the LED output.
Reverse polarity	The LED driver will not yield any current if the polarity of the load on the LED output is reversed. This situation will not damage the LED driver but may damage the LED load.
LED protection	
Thermal protection LED	An external NTC thermistor, which is placed on a PCB near the LEDs, can be connected to the driver via the LEDcode/NTC terminals. The output current to the LEDs is then decreased by 75% whenever the NTC exceeds a maximum allowable temperature, which is specified by the user in the FluxTool software. The default NTC temperature limit is set to 70 °C.
Thermistor value	47kΩ
Suitable thermistors	leaded: Vishay, P/N 238164063473 screw: Vishay, P/N NTCASCWE3473J

<u>A</u>	Risk of electrical shock. May result in serious injury or death. Disconnect power before servicing or installing.
<u></u>	The LED driver may only be connected and installed by a qualified electrician. All applicable regulations, legislation, and building codes must be observed. Incorrect installation of the LED driver can cause irreparable damage to the LED driver and the connected LEDs.
	Pay attention when connecting the LEDs: polarity reversal results in no light output and often damages the LEDs.
<u></u>	LED drivers are designed and intended to operate LED loads only. Powering non-LED loads may push the LED driver outside its specified design limits and is, therefore, not covered by any warranty.
(i)	eldoLED products are designed to meet the performance specifications as outlined at certain operating conditions in the data sheet. It is the responsibility of the fixture manufacturer to test and validate the design and operation of the system under expected and potential use cases, including faults.
(i)	Please observe voltage drop over long cable lengths. Longer cable lengths increase EMI susceptibility.
(j)	Product renderings and dimensional drawings are generic for the housing type. Product label, connector type and quantity may vary.
