Stainless steel tag plate and wire	Code 9941
Housing prepared for lead seal by customer	Code 8991

Principle

A vapour filled flexible sensing element actuates a microswitch by means of a piston. The set point is adjusted by means of a compressible spring installed in opposition.

Set point and reset point must be between 10% and 90% of the selected scale.

Standard factory adjustment

Setpoint at 50% of the scale on falling temperature

Customer specific factory adjustment (option SETP)

The following specifications have to be given with the order:

- Setpoint value
- Adjustment on falling or raising temperature

Adjustable ranges

Scale	T°C max	Code	Micro-switch dead band ¹⁾	
			Fixed dead band	
			M	
°C	°C		10%	90%
			°C	°C
-46 ... 0	40	40	5	4
-20 ... 20	60	41	5	4
0 ... 45	80	42	3.5	3
40 ... 120	145	43	6	6
100 ... 180	190	44	7	5.5
20 ... 90	120	45	11	11
160 ... 250	290	46	6.5	5
70 ... 150	175	48	11	8

¹⁾ The value of the dead band is depending on the value of the set point. This table contains the dead band values for set point adjustment at 10% and 90% of the selected scale. For other set points the dead band value can be calculated by linear interpolation between the values at 10% and 90%.

Electrical connections

Micro switch Terminal block

For max. ambient temperature according to temperature classes T5 and T6 refer to technical data on page 1.
The installation must be made in an intrinsically safe circuit whose certified electrical safety parameters do not exceed any of the values U_{max} , I_{max} and P_{max} given in the electrical data on page 1.

All necessary measures must be taken by the user, to avoid the calorific transfer from the fluid to the apparatus head increasing the head's temperature to such that it reaches the self-ignition temperature of the gas in which it is used.

Dimensions (mm)

Direct mount temperature switches

Temperature switches with capillary

S = Bulb length (temperature sensitive part)

A = Additional stem length (min. 25 mm)

P = Immersion length (P = S + A)

K = Capillary length (only TD1, TD2, TD3)

E = Extension between process connection and housing only TRDE1 and TRDE2

For version TD1 there is no additional stem length (A = 0). The sliding connection is mounted on the capillary.

Stainless steel sliding male connection (TD2/3, TRDE1/2)

Thread and sizes		
F	G 1/2	1/2 NPT
H	18	21
L	36	40
A	17/flat	17/flat
B	23/flat	23/flat

After tightening of the clamping nut, the stem is fixed in the process connection. Tight up to 40 bar.
