Light barrier amplifier

ICL-6100

Features

- 6-channel multiplex amplifier
- Automatic operation for compensation of interference, degradation, and misalignment
- Permanent sensor control
- Test button for diagnosis function
- Analog output 0-10 V DC for testing purposes
- Master-Slave
- · Transistor output PNP per channel short circuit proof
- Transmitter and receiver connections are short circuit proof
- Serial interface (RS232) for PC connection
- Connections are pluggable
- Mounting for DIN rail EN 60715

Short Description

Light barrier amplifiers to be used for the detection of objects in machines or production systems. They form, in conjunction with one infrared transmitter and receiver a powerful light barrier and they are useable in areas with a long range or an extreme degree of pollution in which traditional light barriers reach their limits. The modulation of the infrared light will additionally give the system a high degree of immunity to ambient light, disturbing impulse and influence from other light barriers.

The amplifier ICL-6100... is a compact device which can control six light barriers without mutual influences. An additional amplifier can be synchronized with the Master-Slave connection, to prevent interferences between the light barriers. For a better alignment of the sensor heads the device has an analog output and provides a voltage, which is proportional to the received signal. The highest value represents an optimal adjustment. The ampfier is equipped with an automatic power adjustment, with which the transmit power adjusts to the special environments of the application. To increase the overall accuracy of the device, permanent sensor monitoring was included, which detects errors at the sensor heads and signals this to the user by the alarm output. Included as extra equipment is the integrated test input with which it is possible to make an examination of the light barrier system's functionality. A short circuit proofed switching output reports the light beam status to an evaluation unit, (e.g. a PLC). As a special feature, the device includes a serial interface for easy operation with a PC (Software is optionally available).

Infrared transmitters and receivers in different, compact and robust designs are described in the sensor heads datasheet.

Accessories

Communication cable Power supply 24 V DC Protective enclosure Order code CAB-COM-2m PSU-1000S/95-265VAC PanBox 1x8

Safety Instructions

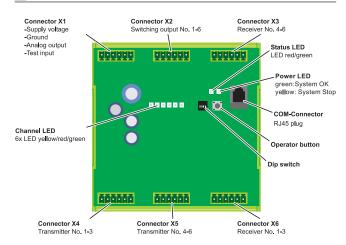

The infrared light barriers ICL-6100 are not safety systems and should not be used as such systems.

Order code

ICL-6100/24VDC

The devices are not to be used for applications, where personal safety is dependent on their function.

Device Overview
